Prediction of the Coding Sequences of Mouse
KIAA-Monlogous cDNAs Identified Sequences of 500 Mouse
KIAA-Homologous cDNAs Identified by Screening of Terminal Sequences
of CDNA Clones Randomly Sampled from Size-Fractionated Libraries
INS (bases 1 to 5204)
Cocazaki,N., Kikuno,R.F., Nagase,T., Ohara,O. and Koga,H.
Direct Submission
Submitted (19-MAY-2004) Hisashi Koga, Kazusa DNA Research
Institute, Laboratory for Genome Informatics, 2-6-7

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 780
                                                                                         The invention relates to a novel isolated human N-acetylglucosamine-1-phosphotransferase (GlcNAc-phosphotranferase) (I) and phosphodiester alpha-GlcNAcase (N-acetylglucosamine-1-phosphodiester alpha-N-Actylglucosaminidase) (II). The protein of the invention has nephrotropic activity, and may be useful in enzyme replacement therapy. A protein of the invention (I), (II) is useful for preparing a protein of the invention (I), (II) is useful for preparing a comprising a terminal mannose-6-phosphate, is useful for treating a patient suffering from a lysosomal storage disease. The present sequence is used in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                         9

Phosphorylating a protein for treating a patient suffering from a lysosomal storage disease e.g. Fabry's disease by contacting the protein with a soluble GlcNAc-phosphotransferase and producing a phosphorylated WPI; 2003-801323/75. P-PSDB; ADD27812, ADD27813. ID NO Disclosure; SEQ protein. RRXFFFFXXXX00000

The invention relates to a method of phosphorylating a protein comprising contacting the protein with a soluble GlcNAc-phosphotransferase (UDP-N-acetylglucosamine) and producing a phosphorylated protein. The method is useful for treating a patient suffering Irom a lysosomal storage disease e.g. Fabry's disease. The present sequence represents the human GlcNAc-

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               셤
                                                                                                                                                                                                                                         The invention relates to a method for producing a high mannose glycoprotein. The method comprises: introducing and expressing a polynucleotide encoding a glycoprotein into a mammalian cell; culturing the cell in the presence of a lectin to obtain a lectin resistant cell; isolating the cell; culturing the cell in the presence of decoymannojirinycin and kifunensine to inhibit glycosylation of the glycoprotein; and collecting the glycoprotein. The invention is useful in gene therapy. The method is useful for producing a high mannose lycoprotein in a complex carbohydrate deficient cell for treating lysosomal storage disease. The present sequence is human N-acetylglucosamine-1 (GLCNAc)-phosphotransferase alpha/beta subunit
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  300

                                                                                                                                                                                                                                                   The present invention provides a method of producing a glycoprotein having reduced complex carbohydrates by culturing the lectin resistant mammalian cell expressing the glycoprotein. The method is useful for producing a glycoprotein with reduced complex carbohydrates for treating tyosomal storage disease. The present invention is also useful in gene therapy. The present sequence is human N-acetylglucosamine-1 (GlcNAG)-phosphotransferase alpha/beta subunit precursor cDNA

                                                                                                                                                                                                                                                                                                                  Baughin MR, Lu Y, Arvizu C, Ramkumar J, Yao MG, Policky JL;
Walia NK, Tribouley KM, Yue H, Barra S, Ding L, Lal PG;
Borowsky ML, Lu DAM, Gandhi AR, Griffin JA, Xu Y, Azimzai Y;
Gierzen Ky, Tng YT, Warren BA, Mason PM, Burford N, Hafalia AJA;
Lee EA, Yang J, Gorvad AE, Emerling BM, Marquis JP, Lee SY;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to nucleic acid-associated proteins (NAAP) and nucleic acids. The nucleic acid and amino acid sequences are useful for diagnosing, treating and preventing cell profiferative e.g. arteriosclerosis, atherosclerosis, lymphoma or cancers), neurological (e.g. epilepsy, Alzheimer's disease or stroke), developmental, and autoimmune disorders (e.g. AIDS, allergies, or anaemia) or infections (e.g. malaria, or leishmania) as well as in assessing the effects of exogenous compound on the expression of nucleic acid and amino acid sequences of nucleic acid-associated proteins. The invention is useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                2 GAAGCTGCAATGAAGCGGCGCCGGAAGCTGTGACCTGCGCGCGGCGGGGCCCGACCGGGGCC

Novel N-acetylglucosamine-1-phosphotransferase and N-acetylglucosamine-1-phosphodiester alpha-N-Acetylglucosaminidase, useful for producing phosphorylated lysosomal hydrolase for treating lysosomal storage diseases.

Example 9; Page 52-54; 62pp; English,

8 8 8

4 The invention relates to a novel isolated human N-acetylglucosamine-1-phosphotransferase (GlcNAc-phosphotranferase) (I) and phosphodiester Alpha-GlcNAcase (N-acetylglucosamine-1-phosphodiester alpha-N-Acetylglucosaminidase) (II). The protein of the invention has nephrotropic activity, and may be useful in enzyme replacement therapy. A protein of the invention (I), (II) is useful for preparing a protein of the invention (I), (II) is useful for preparing a phosphorylated lysosomal hydrolase. The phosphorylated hydrolase comprising a terminal mannose-6-phosphate, is useful for treating a patient suffering from a lysosomal storage disease. The present sequence is used in the exemplification of the invention

alpha-GLCNAGASE (N-acetylglucosamine-1-phosphodiester alpha-NAcetylglucosaminidase) (II). The protein of the invention has
nephrotropic activity, and may be useful in enzyme replacement therapy. A
phosphorylated lysosomal hydrolase. The phosphorylated hydrolase
phosphorylated lysosomal hydrolase. The phosphorylated hydrolase
comprising a terminal mannose-6-phosphate, is useful for treating a
patient suffering from a lysosomal storage disease. The present sequence
is used in the exemplification of the invention CCCAGAAGGAGGATACACAAAGAAGCTAGTCCCAATCGAATCAGAGTATAGAAGATC 3941 3783 AGCCGAGATCAATACCATGTTTTGTTTTGATTCCTATAGAGACAATATTGCTGGAAAGTCC TITCAGAATCGGCTITGTCTGCCCATGCCGATTGACGTTGTTTACACCTGGGTGAATGGC Gaps Human; N-acetylglucosamine-1-phosphotransferase; nephrotropic; GlcNAc-phosphotranferase; phosphodiester alpha-GlcNAcase; N-acetylglucosamine-1-phosphodiester alpha-N-Acetylglucosaminidase; enzyme replacement therapy; phosphorylated lysosomal hydrolase; lysosomal storage disease; gene; ss.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a method of phosphorylating a protein comprising contacting the protein with a soluble GlcNAc-phosphotransferase (UDP-N-acetylglucosamine) and producing a phosphorylated protein. The method is useful for treating a patient suffering from a lysosomal storage disease e.g. Fabry's disease. The present sequence represents the soluble human GlcNAc-phosphotransferase DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            356
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         162
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       416

The method comprises: introducing and expressing a plycoprotein into a mammalian cell; culturing the cell in the presence of a lectin to obtain a lectin resistant cell; isolating the cell; culturing the cell in the presence of decymannojirinycin and kitunensine to inhibit glycospration of the glycoprotein; and collecting the glycoprotein. The invention is useful in gene. therapy The method is useful for producing a high mannose lycoprotein; in a complex carbohydrate deficient cell for treating lysosomal storage disease. The present sequence is N-acetylglucosamine-1 (GICNAC)-phosphotransferase cDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           162
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention provides a method of producing a glycoprotein having reduced complex carbohydrates by culturing the lectin resistant mammalian cell expressing the glycoprotein. The method is useful for producing a glycoprotein with reduced complex carbohydrates for treating lysosomal storage disease. The present invention is also useful in gene therapy. The present sequence is N-acetylglucosamine (GlCNAc)-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Producing a glycoprotein with reduced complex carbohydrates by culturing the lectin resistant mammalian cell expressing the glycoprotein for treating lysosomal storage disease.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ø
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a novel isolated human N-acetylglucosamine-1-phosphotransferase (GlcNAc-phosphotranferase) (I) and phosphodiester alpha-GlcNAcase (N-acetylglucosamine-1-phosphodiester alpha-N-Actylglucosaminidase) (II). The protein of the invention has nephrotropic activity, and may be useful in enzyme replacement therapy. A protein of the invention (I), (II) is useful for preparing a protein of the invention (I), (II) is useful for preparing a phosphorylated lysosomal hydrolase. The phosphorylated hydrolase comprising a terminal mannose-6-phosphate, is useful for treating a patient suffering from a lysosomal storage disease. The present sequence is used in the exemplification of the invention

The invention relates to a method of phosphorylating a protein comprising contacting the protein with a soluble GlcNAc-phosphotransferase (UDP-N-acetylglucosamine) and producing a phosphorylated protein. The method is useful for treating a patient suffering from a lysosomal storage disease e.g. Fabry's disease. The present sequence represents a GlcNAc-phosphotransferase associated DNA. Phosphorylating a protein for treating a patient suffering from a lysosomal storage disease e.g. Fabry's disease by contacting the protein with a soluble GloNac-phosphotransferase and producing a phosphorylated protein. 9 ds, mouse; protein phosphorylation; soluble GlcNAc-phosphotransferase; UDP-N-acetylglucosamine; lysosomal storage disease; Fabry's disease; Gaps DB 10; Length 5229; Sequence 5229 BP; 1485 A; 1242 C; 1199 G; 1302 T; 0 U; 1 Other; 833; Indels 137; Similarity 79.1%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a method for producing a high mannose glycoprotein. The method comprises: introducing and expressing a polynucleotide encoding a glycoprotein into a mammalian cell; culturing the cell in the presence of a lectin to obtain a lectin resistant cell; isolating the cell; culturing the cell in the presence of deoxymannojirimycin and kifunensine to inhibit glycosylation of the glycoprotein; and collecting the glycoprotein. The invention is useful if the rapy. The method is useful for producing a high mannose glycoprotein in a complex carbohydrate deficient cell for treating lysosomal storage disease. The present sequence is mouse cDNA used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        the

21; 209 The present invention provides a method of producing a glycoprotein having reduced complex carbohydrates by culturing the lectin resistant mammalian cell expressing the glycoprotein. The method is useful for producing a glycoprotein with reduced complex carbohydrates for treating lysosomal storage disease. The present invention is also useful in gene therapy. The present sequence is mouse DNA used to illustrate the method Producing a glycoprotein with reduced complex carbohydrates by culturing the lectin resistant mammalian cell expressing the glycoprotein for Gaps Length 5229; 1485 A; 1242 C; 1199 G; 1302 T; 0 U; 1 Other; 833; Indels 137; DB 10; Score 2820.8; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 20., Application US/09635872A
Patent NO. 6534300
GENERAL INFORMATION:
FAPLICANT: CANFIELD, WILLIAM
TITLE OF INVENTION: METHODS FOR PRODUCING HIGHLY PHOSPHORYLATED LYSOSOMAL HYDROLASES
FILE REFERENCE: 195611050
CURRENT FILING DATE: 2000-08-10
PRIOR APPLICATION NUMBER: 60/153,831
PRIOR APPLICATION NUMBER: 60/153,831
PRIOR PILING DATE: 1999-09-14
NUMBER OF SEQ ID NOS: 52
SOFTWARE: Patentin version 3.0
                                                                                                                                                                                                                                                                                                                                                                                                     5280
                                                                                                                                                                                                                                                                                                                                                                                                                                                        5340
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              5460
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      5460
                                                                               4920
